

AirZip Accelerator for WebSphere

Quick Image Delivery over Low Bandwidth and Congested Networks

Web image optimization allows for up to 400% reduced time to download image content over limited bandwidth and wireless connections

Accelerated Image Delivery Combining Quality and Speed

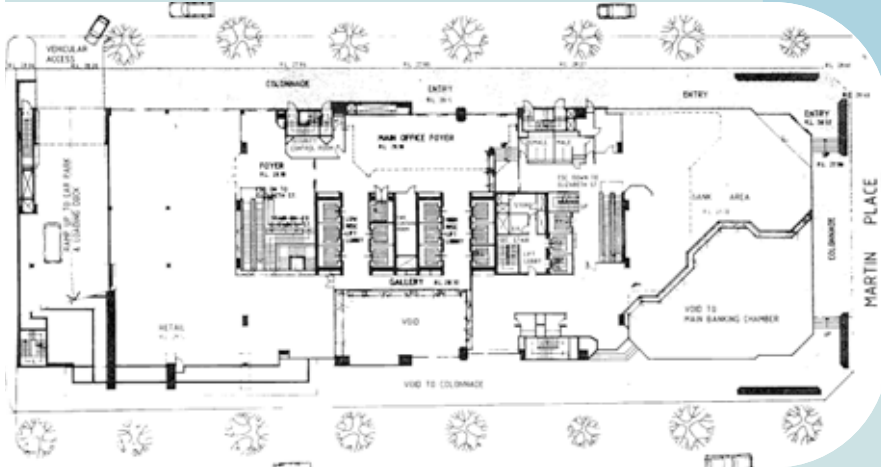

Images are as much of an asset to an organization's productivity as files, documents, and other data. Web sites especially contain detailed images, graphics, and photographs. Yet, the download time and clarity of these images are often compromised due to bandwidth limitations and image file size. Users are forced to experience lengthy delays in productivity trying to access needed images. *AirZip™ Accelerator* for the IBM WebSphere® platform optimizes image files and speeds their delivery over dialup or wireless connections, improving delivery time and image clarity by up to 400% without the need to modify Web content.

In industries such as emergency response, law enforcement, oil and gas, environmental resource management, geologic services, public safety, transportation and logistics, airlines, and real estate, the *AirZip Accelerator* solution offers quick image delivery and optimization to view different types of maps, geographic regions, directional images, geologic areas, and biometric data such as fingerprints.

Highlights

- *Speeds image delivery across networks by up to 400%*
- *Improves performance on congested network lines*
- *Enables delivery of complex images across low bandwidth networks*
- *Uses existing server and network infrastructure; no additional investment needed*
- *Works with or without AirZip™ client software*
- *Image delivery in standard formats such as JPEG and GIF*
- *Works with IBM HTTP Server and WebSphere Application Server*

System Requirements

Platforms

AIX

Linux

Solaris

Windows

Pocket PC 2002,

WinCE.NET, EPOC 5

Servers

IBM WebSphere

Application Server v4.01

or later

IBM HTTP Server v2.0.42

or earlier

Browsers

Netscape 4.07 or higher

Microsoft Internet

Explorer 4.0 or higher

Opera 5.0 or higher

Image Optimization and Viewing

A high performance, real-time image optimization application, AirZip image compression software drives *AirZip Accelerator* for WebSphere, enabling superior image delivery speed and rapid conversion of various file formats such as GIF, JPEG, BMP and PNG to AirZip formats, where browsers are able to present AirZip images. The files are compressed to the smallest representation of an image to reduce the download time. Image optimization is determined by the capability of the browser requesting the image(s) and the quality of the image(s) requested by the user.

AirZip Accelerator supports any HTTP client application and does not require client software to function. For enhanced image rendering and optimal download performance, Windows platform users can download the AirZip Internet Explorer plug-in and view images up to ten times faster.

AirZip Accelerator for WebSphere is available exclusively from Willow Technology and its resellers.
